NICKEL ALLOY

725 - 2.7725

725 - 2.7725

Alloy 725 2.7725 is a nickel-chromiummolybdenum-niobium aged hardenable grade with extremely high strength. Alloy 725 was developed from Alloy 625 by adding strengthening elements aluminium and titanium to enhance its mechanical properties and for ductility and toughness. In addition, the alloy has high corrosion resistance including resistance to hydrogen embrittlement and stress corrosion cracking.

KEY FEATURES

- High strength and toughness
- High temperature resistance
- Good resistance to oxidation
- Corrosion resistance

MARKET SECTORS

Turbine blades, discs, shafts, structural components

High strength fasteners, subsea equipment

Turbine discs, blades, shafts, nuclear power plants

Reactors, vessels, heat exchangers, piping systems

Fasteners, valves, pumps, landing nipples, side pocket mandrels

Distillation columns, catalyst support systems
